

Sales of decorative radiators continue to increase. All the more reason for Radson, being a total supplier of heating solutions, to expand its assortment of decorative radiators.

The Narbonne design radiator has flat pipe elements with completely straight corners (70 mm x 11 mm x 1,5 mm). The distance between the pipe elements is only 2 mm.

Those two characteristics give this design radiator a sober appearance: austere and timeless to match every interior!

One or two rows of convection strips are laser-welded onto the watercarrying pipe elements, depending on the type. The radiant heat ranges from 334W and 5658W.

A blind plug and ventilation plug are pre-mounted in the radiator as standard.

To ensure the maximum range of application possibilities, the Narbonne is available in both a horizontal and a vertical version.

Narbonne H

The Narbonne H comes with a decorative top grill and side-cladding that is finished attractively. This horizontal version has wall consoles and is available in types 11, 21, and 22. Lengths from 500 mm to 3000 mm and 4 heights: 358 mm (5 elements), 502 mm (7 el.), 646 mm (9 el.) and 790 mm (11 el.).

Narbonne V

With its slender lines starting at 286 mm (4 el.), the Narbonne V is ideal for placement on a limited wall surface. Other widths are available up to 862 mm (12 el.).

The Narbonne V is available in 5 heights (ranging from 1200 mm

Narbonne H

to 2200 mm) and in 2 types (type 11 and type 21). This vertical version also comes with a middle connection (50 mm).

The Narbonne is delivered standard in RAL 9016 white, but can also be ordered in more than 200 RAL colours, 3 stylish metallic colours and several new matte colours.

Radson offers a 10-year guarantee of quality on its entire selection of radiators and floor-heating systems!
