

If you wish to limit the room temperature to a predefined level:

- Remove the temperature knob.  
Find the temperature indicators [see diagram opposite] and place the pins there.
- Place the knob back on the thermostat.

## REPLACING Emitter BATTERIES

Batteries must be replaced when the receiver does not register orders sent by the emitter [low batteries] or when the light [5] doesn't react to operations carried out on the emitter [flat batteries].

- Replace the batteries with **2 new flat CR2430 type batteries.**

## SPECIFIC RECOMMENDATIONS

When using, you may notice that the upper and lower parts of the appliance are not as hot as the rest of it:

- The upper parts are not completely full to allow for the heat-conductor liquid to expand when the device is switched on.
- The lower parts carry the liquid on its return cycle after it has transmitted its heat.

## SPECIFIC CASE OF REGULATING USING THE PILOT WIRE [BLACK WIRE]

Your appliance enables you to manage orders sent by EDF [cf. Tempo rates]. It also enables you to view them using display [A] or [F] [depending on how the device is equipped]:

1. Comfort: constant green light.
2. Reduced: flashing green light [3,5°C below set temperature].
3. Freeze protection mode: light is off with green flashes [set temperature=7°C].
4. Off: Light is off.
5. Comfort -1°C: green light with single blink.
6. Comfort -2°C: green light with double blink.

Orders generated by the user.

Orders generated by EDF.

## MAINTENANCE

Use a soft, dry cloth to clean the control box.

Never use abrasive cleaning products.

## TECHNICAL SPECIFICATIONS

Margin for measuring temperature	0.1°C [receiver]
Margin for setting the temperature	0.5°C
Range of temperature	5°C -30°C
Electrical protection	Receiver: Class II - IP44
Power [receiver]	12A / 250V RELAIS 16A
Batteries [emitter]	2 flat CR2430 type batteries provided [with an approximately 24 month life]
